

## Introduction

Montage is solution that brings together wireless presentation, collaboration and communications and it's designed to make your meetings as productive and effective as possible

Montage us designed to do away with searching for cables, spending valuable time setting up, or thinking about how you're going to involve someone that's based somewhere else.

It's designed to keep everyone on the same page, involve everyone and improve and speed up the decision-making process.

## Starting a session is easy

(One touch of a button starts your Montage meeting)

The meeting ID and optional Pin appear straight away. Password and pin protected for security and peace of mind.

## Connect up to 12 attendees to your main meeting room display at the same time.

- PC via Windows application or web client
- iOS– you can use Airplay on all iOS devices
- Android using Miracast (one at a time, Access Point must be disabled)
- Mac via AirPlay or web client

Everyone's contribution is available with minimal effort, I'm not wasting valuable time searching for and passing cables and the meeting starts straight away.

Being able to see all devices means everyone's already on the same page and the risk of misunderstanding is reduced.

## View Devices on Screen

With Montage information can be displayed one at a time or simultaneously, to be compared side by side on a main meeting room screen.

Slider on screen allows you to view any combination of devices.

Users can swipe on screen to cycle through screens.

Users are able to see everyone's screen makes it easier for me to reach more informed decisions, I can identify information gaps, draw quicker conclusions and all without disruption to the flow of the meeting.

Users can rearrange the screens either using touch or a mouse so they can share, compare and analyse information from multiple sources

## Annotation on main display

To emphasise or highlight a point.

## **File sharing**

As attendees work together, Montage helps keep us all on the same page by allowing them to share files in real-time without the need for email, pen drives, uploading to shared storage.

## **Anyone can be the presenter at the centre with Active Display**

In Montage there's no need to pass presenter control or grant permissions. One touch and an attendee can become the active display – that means their screen is now the focus. Another click and users can go back to a Montage view.

## **Attendee Contribution**

Attendees in the application or web client can view the active display on their own device. This opens up the ability for them to make contributions using their own pen tool.

## **PC control on main display**

When a PC is the active screen users can choose to take remote control of that PC from the main display with no disruption or break in the flow.

More often than not some of the team won't be in the meeting room or users may want to bring in a supplier, vendor or customer. Their experience can be effective no matter where attendees are.

## **Joining remotely**

With Montage, remote attendees can contribute to the meeting as naturally as being there. They can share content and communicate with everyone in the meeting room reducing travel costs and time.

Remote attendees can view the Active Display on their device and can share content their whole screen or select an application.
