

1. Save Time & Increase Productivity

How:

- Increase Productivity by having more meeting time to achieve your goals/shared outcomes – stop fighting IT problems and start letting the technology work for you.
- Enjoy shorter meetings.
- Wirelessly connect (up to 12 attendees) to the main display with minimal effort. Simple, fast, efficient. Everyone's contribution is available when required.
- While you can 'pass presenter control' it's not necessary. An attendee can bring their information to the fore with a simple click or swipe.
- The meeting should actually start when the meeting starts – no tracking down the required cables or needless peripherals – this is time that should be spent on your actual purpose.

2. Make Quicker Conclusions

How:

- Have all relevant information available on display when required.
- Information can be displayed one at a time or simultaneously, to be compared on a main meeting room screen.
- Attendees can collaborate on any active display, annotating on screen to highlight key information and discussion points.
- The more you achieve in a meeting, the less meetings you'll need to have.

3. Keep Everyone on the Same Page

How:

- Avoid misunderstanding and misinterpretation by sharing files in real-time in the meeting and from the display.
- All content available on screen.
- Anyone can show content to substantiate and clarify their point.
- Annotation available on display and on device to illustrate points.
- Attendee screens can be re-ordered and re-arranged so you can easily view, compare and analyse information from multiple sources.
- Communication is more than just seeing and hearing, manage content together – Show, Discuss and Develop: sharing outcomes to attendees instantly.

4. Efficiently Reach Informed Decisions

How:

- Bring all required contributors to the meeting (in room or remote) helps to improve the decision making process.
- All contributors and information being available and visible enables more informed decisions.
- Easily identify information gaps thanks to compare content side-by-side - productivity benefit of examining inputs side by side.
- Keep your full team informed by having everyone attend, whether 'Across the Room or Across the World'.
- Operate your meeting with the 'Presenter at the Centre' whilst being able to switch with a swipe or a click to Multi-attendee interactivity.
- Don't wait until later to email outcomes. Send files, screen shots, minutes etc. instantly to attendees from within Montage.
- Full Content Control – Show, Share, Create, Change, Annotate.

5. Full Participation – Across the Room or Across the World

How:

- Making external contributions easy, immersive and fully collaborative.
- See & Be Seen: Remote attendees can present and see what others are presenting.
- Remote attendees can see and be seen and heard with 2-way voice and video support.
- Don't travel to be there for meetings, just connect remotely to save time and money.

6. Security, Privacy and Peace of Mind

How:

- Password & pin protected access and full enterprise level encryption for all attendees (remote or in-room).
- Pause screen – freeze your input while you do something else on your device.
- Attendees can choose to display entire primary or secondary screen or a single application as required.
- All data is communicated over TLS and DTLS and is protected with asymmetric cryptography at 2048 bit and symmetric session key of 256 bit. All video, audio & data is secure. (Tech Content: Be aware).

7. Save Money and Resources:

How:

- Montage does away with the need for a separate suite of tools requiring IT resources and maintenance, such as;
 - i. Costly Video Conferencing/Telepresence
 - ii. Expensive Wireless Presentation hardware
 - iii. Screen Sharing technologies
 - iv. Separate annotation software
 - v. File Sharing tool (for post meeting outcome distribution)
- Montage integrates these technologies into a cost effective solution which further enables users to make the most of their existing touch screen displays through its gesture optimisation.
